Line Bending Project: Picture Holder

Objectives

Students will develop their D&T capability by designing and making an original product of good quality that satisfies the requirements of the design brief.

By the end of the assignment, students will know that:

- Shapes can be formed by bending
- Thermoplastics soften and may be bent when heated
- Thermoplastics remain bent / deformed after cooling
- A strip heater / line bender is used to heat thermoplastic sheet materials along a straight line
- Jigs may be used to aid bending thermoplastics
- Jigs may be used to hold heated thermoplastics after line bending
- Hot parts of strip heaters and heated plastics will burn skin so:
  - risk assessments of the hazards should be carried out
  - safe working practices should be adopted.

Success criteria

Each student:

- Has designed and made an original product that satisfies the given design brief and specification
- Has used tools safely and has strived to achieve quality in marking out, cutting, shaping, finishing and joining their chosen materials
- Knows that thermoplastics can be softened by heating
- Knows that line benders are used to heat (relatively) narrow areas of thermoplastic sheet materials
- Knows that thermoplastics soften and can be bent when heated and become rigid again when cooled.
- Knows that jigs may be used to:
  - aid bending thermoplastics
  - hold heated thermoplastics after line bending until the plastic is cool
- Has assessed the risks associated with working with strip heaters and hot thermoplastics and has worked safely throughout the assignment
- Shows evidence of having evaluated his/her work.
Situation

Pictures and photographs remind us of friends, things we've seen and places that we've been to.

Pictures mounted in a frame or in a picture holder are protected and can be displayed on walls and on desks etc.

Design brief

Design a holder for a picture or a photograph.

The picture holder will stand on a table or a sideboard.

Specification

The picture holder must:

- Be made from plastic sheet materials that have been formed by line bending
- Hold a picture or photograph
- Protect the picture from dust
- Allow the picture to be seen clearly
- Allow the picture to be removed from the holder easily
- Be stylish and demonstrate quality in design and manufacture.

The picture holder must not:

- Fall apart in use
- Be dangerous to use
- Damage the picture/photograph

What you must do

- Analyse the design brief and specification and pick out the essential requirements.
- Analyse ways that thermoplastic sheet materials may be used to make the picture frame.
- Research the size of the picture/photograph that will be displayed
- Use notes and sketches to illustrate designs for a picture holder that meet the requirements of the design brief and specification
- Develop your best idea into a final design. Your design should have sufficient detail so that it could be clearly understood and made by someone other than yourself
- Prepare a cutting list of the materials that are required to make your product
- Prepare a Risk Assessment of the hazards involved with making and using your product
- Make a jig that will enable the plastic sheet to be bent accurately and to be held until cool
- Make your design
- Evaluate the final product, e.g.:
  o how good the design looks
  o how well the design works
  o discover what others think about your product.
- Work safely and complete the assignment on time
