

Line Bending Project: Sticky Tape Dispenser

Objectives

Students will develop their D&T capability by designing and making an original product of good quality that satisfies the requirements of the design brief.

By the end of the assignment, students will know that:

- Shapes can be formed by bending
- Thermoplastics soften and may be bent when heated
- Thermoplastics remain bent / deformed after cooling
- A strip heater / line bender is used to heat thermoplastic sheet materials along a straight line
- Jigs may be used to aid bending thermoplastics
- Jigs may be used to hold heated thermoplastics after line bending
- Hot parts of strip heaters and heated plastics will burn skin so:
 - risk assessments of the hazards should be carried out
 - safe working practices should be adopted.

Success criteria

Each student:

- Has designed and made an original product that satisfies the given design brief and specification
- Has used tools safely and has strived to achieve quality in marking out, cutting, shaping, finishing and joining their chosen materials
- Knows that thermoplastics can be softened by heating
- Knows that line benders are used to heat (relatively) narrow areas of thermoplastic sheet materials
- Knows that thermoplastics soften and can be bent when heated and become rigid again when cooled.
- Knows that jigs may be used to:
 - aid bending thermoplastics
 - hold heated thermoplastics after line bending until the plastic is cool
- Has assessed the risks associated with working with strip heaters and hot thermoplastics and has worked safely throughout the assignment
- Shows evidence of having evaluated his/her work.

Situation

Sticky tape is often used in schools and offices. It is easier and more convenient to use the tape if it is held in a tape holder or dispenser.

Design brief

Design a tape dispenser for the size of sticky tape that you would normally use.

Specification

The tape holder/dispenser must:

- Be made from plastic sheet materials that have been formed by line bending
- Hold a roll of sticky tape
- Allow tape to be pulled from the roll
- Allow tape to be cut from the roll
- Allow rolls of tape to be removed and replaced easily
- Be stylish and demonstrate quality in design and manufacture.

The tape holder/dispenser must not:

- Fall apart in use
- Be dangerous to use.

What you must do

- Analyse the design brief and specification and pick out the essential requirements.
- Analyse ways that thermoplastic sheet materials may be used to make the tape holder/dispenser.
- Research the size of rolls of sticky tape
- Use notes and sketches to illustrate designs for a sticky tape dispenser that meet the requirements of the design brief and specification
- Develop your best idea into a final design. Your design should have sufficient detail so that it could be clearly understood and made by someone other than yourself
- Prepare a cutting list of the materials that are required to make your product
- Prepare a Risk Assessment of the hazards involved with making and using your product
- Make a jig that will enable the plastic sheet to be bent accurately and to be held until cool
- Make your design
- Evaluate the final product, e.g.:
 - how good the design looks
 - how well the design works
 - discover what others think about your product.
- Work safely and complete the assignment on time.
